THESIS

**BIONOMICS AND CONTROL EFFECTS OF
ANOPHELES STEPHENSI IN MANNAR AND JAFFNA
DISTRICTS OF SRI LANKA**

Submitted by

P. JUSTIN JUDE

FGS/ME/PhD/ME/2019/01

A thesis submitted to the Faculty of Graduate Studies, University of Kelaniya

in fulfillment of the requirements for the degree of

Doctor of Philosophy

in

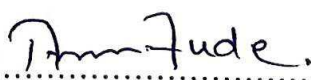

Medical Entomology

FEBRUARY 2023

DECLARATION

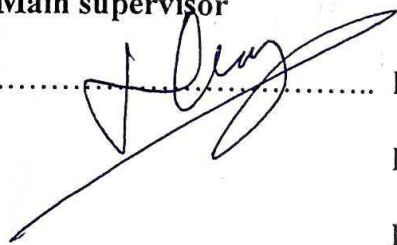

I declare that the work embodied in the thesis is my own and has not been submitted for any degree in this university or any other institute, and to the best of my knowledge and belief, it does not contain any material previously published or written or orally communicated by another person except, where due reference is made in the text.

..... Signature of the candidate

21/02/2023..... Date

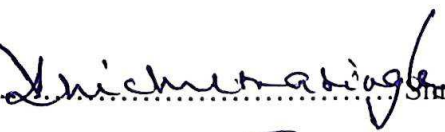

To the best of our knowledge we endorse the declaration by the candidate.

Main supervisor

..... Prof. P.A.D.H.N. Gunanthilaka,
Professor in Parasitology,
Department of Parasitology, Faculty of Medicine,
University of Kelaniya, Sri Lanka.

Co-supervisors

W. Abeyewickreme..... Prof. W. Abeyewickreme,
Department of Para Clinical Sciences
Faculty of Medicine,
General Sir John Kotelawala Defence University

..... Prof. A. Rajitha Wickramasinghe
Head, Department of Public Health,
Faculty of Medicine,
University of Kelaniya, Sri Lanka

TABLE OF CONTENTS

CHAPTER 1: Introduction...	1
1.1 Background...	1
1.2 Justification of the study...	4
1.3 Objectives...	6
2.1. Malaria in Sri Lanka...	6
2.2. Malaria vectors in Sri Lanka...	10
2.3. Breeding habitats of anopheline mosquitoes...	13
2.4. <i>Anopheles stephensi</i> as a disease vector...	18
2.5. Sibling species and species complex...	20
2.6. Anopheline species complexes in Sri Lanka...	21
2.7. Global distribution of <i>Anopheles stephensi</i> ...	22
2.8. Factors influencing on the vectorial capacity of malaria vectors...	24
2.9. Adaptation of anopheline mosquitoes to breed under different water conditions in Sri Lanka...	26
2.10. Insecticide based vector control approaches for malaria control in Sri Lanka	28
2.11. Biological control efforts against malaria vector in Sri Lanka.....	32
CHAPTER 3: Methodology...	34
3.1. Selection of study sites...	34
3.2. Field based Entomological investigations...	37
3.2.1. <i>Anopheles larval/pupal</i> surveillance...	37
3.2.2. <i>Anopheles</i> adult surveillance...	38
3.2.2.i. Cattle Baited Net Trap (CBNT) Collection...	38
3.2.2.ii. Indoor Hand Collection (HC).....	39

3.3. Morphological identification of field caught samples.....	40
3.3.1. Identification of adult <i>Anopheles</i> mosquitoes.....	42
3.3.2. Identification of larval stages.....	40
3.3.3 Pupal identification.....	41
3.4. Establishing a laboratory colony of <i>An. stephensi</i>	41
3.5. Biology, bionomics and life-table studies of <i>Anopheles stephensi</i>	42
3.5.1. Biology and bionomics of adult <i>An. stephensi</i>	42
3.5.1.i. Gonotrophic cycle, egg development and hatchability.....	42
3.5.1.ii. Adult longevity and survivorship.....	43
3.5.1.iii. Biting frequency of adult <i>An. stephensi</i> females.....	43
3.5.1.iv. Mating success of adults.....	44
3.5.1.v. Morphometric characterization of adults... ..	44
3.5.2. Biology and bionomics of immature stages of <i>An. stephensi</i>	47
3.5.2 i Characterization of the biotype of <i>An. stephensi</i> by egg morphology... ..	47
3.5.2.ii Resting depth of larvae... ..	48
3.5.2.iii Development responses of larval stages to different salinity levels... ..	48
3.5.2.iv Body size of larvae and pupae... ..	49
3.5.2.v. Larval development time and larval survivorship... ..	52
3.5.2.vi. Pupation success, survivorship, adult emergence and sex ratio... ..	52
3.6. Estimating the vectorial capacity of <i>Anopheles stephensi</i>	53
3.7. Evaluation of larval control intervention.....	53
3.7.1. Experimental material and evaluation of larvicidal efficacy... ..	53
3.7.2. Evaluation of larvivorous fish as larval control intervention.....	54
3.7.2.i. Collection of larvivorous fish... ..	54
3.7.2.ii. Rearing of larvivorous fish... ..	54

3.7.2.iii. Evaluation of the survival at different chlorine concentrations.....	55
3.7.2.iv. Survival of <i>An. stephensi</i> at different chlorine concentrations.....	55
3.7.2.v. Larvivorous efficacy of <i>P. reticulata</i> at different chlorine levels.....	56
3.8. Collection of climatic data... ..	56
3.9. Data analysis.....	57
3.9.1. Mosquito prevalence and relationship with climatic variable... ..	57
3.9.2 Biology, bionomics and life-table studies of <i>Anopheles stephensi</i>	57
3.9.3 Development responses of larval stages to different salinity levels... ..	57
3.9.4. Evaluation of larvicidal efficacy... ..	58
3.9.5 Larvivorous efficacy of <i>P. reticulata</i>	58
3.10. Ethical aspects... ..	59
CHAPTER 4: Result... ..	60
4.1. Mosquito collections by different techniques... ..	60
4.2. Relative abundance of anophelines encountered from each district... ..	60
4.2.1. Mannar District... ..	60
4.2.2. Jaffna District... ..	61
4.3. Temporal variation of anopheline abundance and climate dependency... ..	63
4.3.1. Cattle baited net trap collections... ..	63
4.3.1.ii. Mannar District... ..	63
4.3.2. Indoor hand collection... ..	71
4.3.2.i. Jaffna District... ..	71
4.3.2.ii. Mannar District... ..	71
4.3.3. Larval surveys... ..	74
4.3.3.i. Jaffna District... ..	74
4.3.3.ii. Mannar District... ..	74

4.4. Biology, bionomics and life-table studies of <i>Anopheles stephensi</i>	77
4.4.1. Morphometric parameters and biology information of <i>An. stephensi</i>	
adults.....	77
4.4.2. Characteristic of immature stages.....	79
4.4.2.i. Hatching rate of eggs and larval morphometry.....	79
4.4.2.ii. Development from pupae to adults and morphometric characteristics	
of the pupal stage.....	81
4.4.3. Salinity tolerance of first and third instar larvae.....	82
4.4.3.i. Survival of <i>Anopheles stephensi</i> first instar larvae.....	82
4.4.3.ii. Salinity tolerance of third instar larvae of <i>Anopheles stephensi</i>	86
4.4.3.ii. Lethal Concentration of salinity for the survival of <i>Anopheles stephensi</i>	
larvae.....	90
4.4.3.iii. Distribution of Biotypes of <i>An. stephensi</i> eggs.....	94
4.5. Estimating the vectorial capacity of <i>An. stephensi</i> mosquitoes.....	97
4.6. Evaluation of larval control intervention.....	98
4.6.1. Use of chemical larvicides to control <i>An. stephensi</i>	98
4.6.1.i. Larval mortality of <i>An. stephensi</i> after 1-hour exposure period to	
insecticides.....	98
4.6.1.ii. Larval mortality of <i>An. stephensi</i> after 24-hour exposure period to	
insecticides.....	98
4.6.2. Evaluation of larvivorous fish to control <i>An. stephensi</i>	105
4.6.2.i. Survival of <i>P. reticulata</i> captured from Mannar and Jaffna Districts	105
4.6.2.ii. Survival of <i>P. reticulata</i> at different chlorine concentrations.....	107
4.6.2.iii. Survival of <i>An. stephensi</i> at different chlorine concentrations.....	108
4.6.2.iv. Larvivorous efficacy of <i>P. reticulata</i> at different chlorine levels.....	109

CHAPTER 5: Discussion.....	112
5.1. Distribution and species abundance.....	112
5.2 Biology, bionomics and life-table studies of <i>Anopheles stephensi</i>	116
5.2.1 Development responses of larval stages to different salinity levels.....	119
5.2.2 Vectorial capacity of <i>An. stephensi</i>	123
5.3 Evaluation of Larval control intervention.....	126
5.3.1 Evaluation of larvicidal efficacy.....	126
5.3.2 Evaluation of larvivorous fish.....	131
CHAPTER 6: Conclusion.....	135
REFERENCES.....	137

ACKNOWLEDGEMENTS

I wish to record my sincere thanks to my supervisors Professor Nayana Gunathilaka, Department of Parasitology, University of Kelaniya for his continuous support, advice, valuable suggestions, heart inspiring guidance and tremendous encouragement throughout the degree programme. I am also grateful to my co-supervisors Professor W. Abeyewickreme, Department Parasitology, and Professor. A.R. Wickremasinghe for their advice and guidance.

I also extend my sincere thanks to Professor Deepika Fernando, Department of Parasitology, University of Colombo and Dr. P. H. Premaratne Department Parasitology, John Kotelawela Defence University, for their valuable guidance and support. I wish to record my special thanks to Dr. Lahiru Udayanga Department of Biosystems Technology, Wayamba University of Sri Lanka, and Dr. Tharaka Wijerathna, Department of Parasitology, Faculty of Medicine, University of Kelanniya for their guidance and assistance to the present research work.

I gratefully acknowledge the assistance rendered by the members of the Entomology teams attached to the Anti Malaria Campaign of the districts of Mannar, and Jaffna for their assistance in collecting mosquitoes. Finally, my everlasting love and gratitude to my wife, mother, brothers, and sisters who have helped me in numerous ways in the completion of this research project.

I gratefully acknowledge the National Research Council of Sri Lanka for the financial assistance through the grant (18-057) awarded to Professor W. Abeyewickreme and Professor Nayana Gunathilaka.

ABSTRACT

Background: Sri Lanka was declared as a country that eliminated malaria disease in 2016 by the World Health Organization. Recent report of *Anopheles stephensi* as an invasive vector in the northern part of Sri Lanka is one of the challenges to maintain the malaria free states in the country.

Methods: Entomological surveys were conducted at three selected localities in Jaffna and Mannar Districts of Sri Lanka from January 2019 to January 2020 using three entomological techniques. Detailed biology and life cycle related information namely were assessed. Further, effectiveness of insecticide based control efforts (novaluron and temephos) and application of larvivorous fish *Poecilia reticulata* were evaluated under laboratory set-up. The Vectorial Capacity (VC) was calculated using a mathematical-based approach.

Results: According to the egg morphology, *Mysorensis* biotype (47%) was the predominant followed by type (38.1%) and intermediate (14.9%). The mating success was $80.7 \pm 4.45\%$. The mean hatching period was 1.9 ± 0.03 days, with a hatching rate of $86.2 \pm 0.77\%$. Overall, 8.0 ± 0.14 days were required for larval development and 30.3 ± 0.14 h were spent in the pupal stage. The pupation success was $94.5 \pm 0.37\%$, and the majority were males ($53.1 \pm 0.73\%$). The mean fecundity was 106.5 ± 6.38 eggs and a gonotrophic cycle of 3.4 ± 0.06 days. The female survival rate was $43.2 \pm 2.4\%$, with a mean biting frequency of $66.6 \pm 3.5\%$. The average VC of adult *An. stephensi* was estimated to be 18.7. Significant variations in adult emergence were observed from both larval stages at different salinity levels ($P < 0.05$). The lowest survival rate was reported as $15.8 \pm 2.47\%$ at 25 ppt. The highest mortality rate (100%) at a 1-hour exposure period was observed from temephos at >100 ppm. The mortality rates varied significantly for different concentrations and larvicides ($P < 0.05$). At 24-h of the exposure period, the 100% mortality of *An. stephensi* larvae were observed from both temephos and novaluron even at 0.04 ppm. In larvivorous fish study, the survival rate of *P. reticulata* in both Jaffna and Mannar Districts was significantly different at different chlorine levels ($P < 0.05$). At 1-hour, the lowest survival rate was $53.4 \pm 4.4\%$ in Jaffna and Mannar at 1 mg/L, while the survival rate was $>80\%$ even at 0.75 mg/L. At the 24-hours, the mean survival rates of $70.0 \pm 5.8\%$ (Jaffna) and 81.7 ± 4 (Mannar) were observed at 0.75 mg/L. At 48 hours, the fish survived only at 0.75 mg/L indicating a higher survival rate from Mannar ($81.7 \pm 4.4\%$), while the fish from Jaffna denoted $70.0 \pm 5.8\%$ of survival.

Conclusions: The type biotype, which is an effective vector in the Indian subcontinent is present in Sri Lanka. *Anopheles stephensi* indicated a vectorial capacity of over 18. There is a high potential of increasing density of *An. stephensi* in coastal ecosystems. The temephos and novaluron can be recommended as effective larvicides for chemical-based control of *An. stephensi* in Jaffna, Sri Lanka. The fish captured from Mannar demonstrated a higher tolerance to chlorine levels.

Keywords: Bionomics, malaria, vectorial capacity, control.
