THESIS

SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI
LANKA: PREVALENCE, ASSOCIATED RISK FACTORS, AND CULTURALLY
ADAPTED COGNITIVE BEHAVIOURAL GROUP THERAPY

Submitted by,

B. G. Ransirini de Silva

(FGS/05/PhD/13/2014/51)

A thesis submitted to the Faculty of Graduate Studies, University of Kelaniya

in fulfillment of the requirements for the degree of

Doctor of Philosophy in Clinical Psychology

August 2022

DECLARATION

I hereby declare that the that the work embodied in this thesis is my own, and, has not been submitted for any diploma or degree in this university or any other institution to the best of my knowledge and belief, it does not contain any material previously published or written or orally communicated by another person, except where due reference is made in text.

Signature of the candidate:

Date: 19/08/2022

CERTIFICATION OF SUPERVISORS

To the best of my knowledge, I certify that the above particulars are correct.

Supervisor's name and address:

Signature and Date:

1. Prof. Shehan Williams (Main Supervisor)

Professor of Psychiatry, Department of Psychiatry,

Faculty of Medicine, University of Kelaniya.

Shehan Williams

18/08/2022

2. Prof. Piyanjali de Zoysa

Professor of Clinical Psychology, Department of

Psychiatry,

Faculty of Medicine, University of Colombo.

Piyanjali de Zoysa

19/08/2022

DEDICATION

This dissertation is dedicated to my children, born and yet to be born.

While this thesis was in the works, they too were developing.

For my son, for making me smile and giving me purpose; My Narya.

For my daughter, still in utero; I hope that you are one day an empowered woman in this world and continue to be an inspiration and driving force, as you are to me.

ABSTRACT – STUDY I	xxvii
ABSTRACT – STUDY II	xxix
CHAPTER 1 - INTRODUCTION	
1.1 Mental health as a global concern	1
1.2 Mental health and Sri Lanka	1
1.3 Why Social Anxiety Disorder?	2
1.4 Why university students?	5
1.5 University students and Social Anxiety Disorder: An undesired combination	7
1.6 Why treat Social Anxiety Disorder?	9
1.7 Rationale	10
1.8 Summary of purpose	12
1.9 Objectives of the study	12
1.9.1 Specific objectives of the study	12
STUDY I – SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA: PREVALENCE AND ASSOCIATED RISK FACTORS	

CHAPTER 2 – STUDY I: LITERATURE REVIEW FOR SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA: PREVALENCE AND ASSOCIATED RISK FACTORS

2.0	Introduction	15
2.1	Social Anxiety Disorder	15
2.2	Psychopathology of Social Anxiety Disorder	17
	2.2.1 Feared situations	17
	2.2.2 Symptoms of Social Anxiety Disorder	18
	2.2.3 Cognitive components	18
	2.2.4 Behavioral components	21
	2.2.5 Physiological components	23
2.3	Age of onset, natural course and prevalence	23
2.4	Cross-cultural presentations of Social Anxiety Disorder	26
2.5	Diagnosis and related issues	28
	2.5.1 Comorbidity	28
	2.5.2 Differential diagnoses	30
2.6	Associated features of Social Anxiety Disorder	31
	2.6.1 Marital status	31
	2.6.2 Age	32
	2.6.3 Employment and quality of life	33
2.7	Factors related to the development of Social Anxiety Disorder	34
	2.7.1 Biological Factors	35
	2.7.1.1 Genes	35
	2.7.1.2 Temperament	36
	2.7.1.3 Conditioning and ethological aspects	37
	2.7.2 Environmental Factors	39
	2.7.2.1 Parenting and family environment	39
	2.7.2.2 Socioeconomic status	41
	2.7.2.3 Culture	42
	2.7.2.4 Gender role	43
	2.7.2.5 Adverse life-events	45
	2.7.2.6 Peer rejection and social isolation	47
	2.7.2.7 Body dissatisfaction	49

2.8	A theoretical framework for Social Anxiety Disorder: A multifactorial approach	52
2.9	Assessment of Social Anxiety Disorder	53
2.9.1	Liebowitz Social Anxiety Scale	53
2.9.2	Liebowitz Social Anxiety Scale-Self-Rated	54
2.9.3	Liebowitz Social Anxiety Scale – Self-Rated- Sinhala Version	55
2.10	Summary	56

CHAPTER 3 – METHODOLOGY FOR STUDY I: INVESTIGATION OF THE PREVALENCE AND ASSOCIATED RISK FACTORS OF SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA

3.0	Introduction	57
3.1	Design	58
3.2	Identification and estimation of sample size	58
3.2.1	Study population	58
3.2.2	Sample size calculation	58
3.2.2.1	Inclusion criteria	59
3.2.2.2	Exclusion criteria	59
3.2.3	Sample selection	60
3.3	Study instruments	63
3.3.1	Liebowitz Social Anxiety Scale – Self-Rated Sinhala Version	63
3.3.2	Psychosocial Correlates Questionnaire for Social Anxiety Disorder	63
3.3.3	Instrument identification, adaptation, and validation	64
3.3.3.1	Assessment of prevalence and psychosocial correlates of Social Anxiety Disorder	64
3.3.3.2	Identification of psychometric tools to be implemented	66
3.3.3.2.1	Liebowitz Social Anxiety Scale – Self-Rated Sinhala Version	66
3.3.3.2.2	Body Dissatisfaction Subscale	67

3.3.3.2.3 Adverse Childhood Events Questionnaire	68
3.3.3.3 Adaptation and validation of the instruments	69
3.3.3.3.1 Adaptation and validation of the Body Dissatisfaction Subscale	69
3.3.3.3.2 Cultural, content and consensual validity of the BDS	70
3.3.3.3.2.1 Results and observations from round one	71
3.3.3.3.2.1 Results and observations from round two	73
3.3.3.3.3 Adaptation and validation of the Adverse Childhood Events Questionnaire	74
3.3.3.4 Development of the Psychosocial Correlates Questionnaire for Social Anxiety Disorder	75
3.3.3.4.1 Step 1: Determining the psychosocial correlates to be explored within the survey instrument	76
3.3.3.4.1.1 Literature Review	76
3.3.3.4.1.2 Discussions with contextual experts	77
3.3.3.4.2 Step 2: Generating question items	80
3.3.3.4.2.1 Formatting the questionnaire	81
3.3.3.4.2.2 Question item generation for associated risk factors	82
i. Section one - Demographic data	83
ii. Section two - Socioeconomic background	84
iii. Section three - Details on physical and mental disabilities	85
iv. Section four - Family details and experiences	86
v. Section five - Socio-cultural experiences	88

Part A – School experiences	88
Part B – University details and experiences	89
Part B1 – Communication skills	90
Part B2 – University experiences	91
3.3.3.4.3 Step 3: Content and consensual validation for the Psychosocial Correlates Questionnaire for Social Anxiety Disorder	92
3.3.3.4.3.1 Results and discussion from round one – November 2019	93
i. Section one – Demographic details	93
ii. Section two – Socioeconomic background	95
iii. Section three – Physical and mental health history	95
iv. Section four – Family details	96
v. Section five – Socio-cultural experiences	98
Part A – School experiences	98
Part B – University details and experiences	98
Part C – Social experiences	100
3.3.3.4.3.2 Results and discussion from round two – January, 2020	100
i. Section one – Demographic details	101
ii. Section two – Socioeconomic details	102
iii. Section three – Physical and mental health history	102
iv. Section four – Family details	105
Part A – Family experiences	105

	Part B – Experiences during childhood	106
v.	Section five – Sociocultural experiences	107
	Part A – School experiences	107
	Part B – University details and experiences	107
	Part C – Social experiences	108
3.3.3.4.3	Results from round three – February, 2020	109
3.3.3.4.4	Step 4: Pre-testing	109
3.3.3.4.5	Step 5: Pilot	111
3.3.3.4.5.1	Sample for the pilot	111
3.3.3.4.5.2	Administration of the instrument	112
3.3.3.4.5.3	Results and feedback from pilot study	112
	i. Descriptive Analysis	113
	Section two – Socioeconomic background	113
	Section three – Mental and physical health history	113
	Section four – Family details	114
	Section five – Sociocultural experiences	114
	General comments	115
3.3.3.4.6	Preliminary factor analysis	115
3.3.3.4.7	Reliability of the survey instrument	116
3.4	Ethical consideration	117
3.5	Procedure	119
3.5.1	Logistics and other arrangements	119
3.5.2	Survey administration procedure	120
3.5.2.1	Phase I	120

3.5.2.2 Phase II	121
3.6 Data	122
3.6.1 Quality of data	122
3.6.2 Maintenance and fate of data	123
3.6.3 Data tabulation and analysis	123
3.6.4 Statistical analysis	124
3.7 Summary and discussion	124

CHAPTER 4 – RESULTS – STUDY I - SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA: PREVALENCE AND ASSOCIATED DEMOGRAPHIC AND CLINICAL CHARACTERISTIC FACTORS

4.1 Introduction	127
4.2 Methodology	132
4.3 Results	132
4.3.1 Socio-demographic, psychosocial and clinical characteristics of the study participants	132
4.3.2 Prevalence of Social Anxiety Disorder among university students in Sri Lanka	136
4.3.3 Factors associated with Social Anxiety Disorder among university students in Sri Lanka	136
4.3.4 Factors independently associated with Social Anxiety Disorder among university students in Sri Lanka	139
4.4 Discussion	140
4.4.1 Prevalence rates of Social Anxiety Disorder among university students in Sri Lanka	140
4.4.2 Factors associated with Social Anxiety Disorder among university students in Sri Lanka	142
4.5 Limitations of the study	146
4.6 Implications for the future	147

CHAPTER 5 – STUDY 1 – RESULTS – SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA:

ASSOCIATED FACTORS RELATED TO PHYSICAL DISABILITY AND BODY DISSATISFACTION

5.1	Introduction	149
	5.1.1 Objectives	155
5.2	Methodology	155
5.3	Results	156
	5.3.1 Demographic, physical disability and body dissatisfaction characteristics of study participants	156
	5.3.2 Disability factors associated with Social Anxiety Disorder among university students in Sri Lanka	158
	5.3.3 Body dissatisfaction of physical characteristics as associated factors of Social Anxiety Disorder among university students in Sri Lanka	159
	5.3.4 Body dissatisfaction factors independently associated with Social Anxiety Disorder among university students in Sri Lanka	160
5.4	Discussion	160
5.5	Limitations of the study	167
5.6	Conclusions and implications for the future	167

CHAPTER 6 – STUDY 1 – RESULTS – SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA: ASSOCIATED FACTORS RELATED TO NEGATIVE FAMILY AND ADVERSE CHILDHOOD EXPERIENCES

6.1	Introduction	170
	6.1.1 Objectives	177
6.2	Methodology	177
6.3	Results	178
	6.3.1 Demographic characteristics, negative family and adverse childhood experiences of the study participants	178
	6.3.2 Negative family and adverse childhood experience factors associated with Social Anxiety Disorder among University Students in Sri Lanka	180

6.3.3	Parental and adverse childhood experience factors correlating with Social Anxiety Disorder among University Students in Sri Lanka	182
6.3.4	Negative family and adverse childhood experience factors independently associated with Social Anxiety Disorder among University students in Sri Lanka	184
6.4	Discussion	185
6.5	Limitations of the study	191
6.6	Conclusions and implications for the future	192

CHAPTER 7 – STUDY I – RESULTS – SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA: ASSOCIATED FACTORS RELATED TO LOCAL SCHOOL AND UNIVERSITY EXPERIENCES

7.1	Introduction	196
	7.1.1 Objectives	203
7.2	Methodology	204
7.3	Results	205
	7.3.1 School experiences	205
	7.3.1.1 Demographic characteristics and school experiences of the study participants	205
	7.3.1.2 School experience factors associated with Social Anxiety Disorder among university students in Sri Lanka	207
	7.3.1.3 School experience factors correlating with Social Anxiety Disorder among university students in Sri Lanka	209
	7.3.1.4 School experience factors independently associated with Social Anxiety Disorder among university students in Sri Lanka	211
	7.3.2 University experiences	212
	7.3.2.1 Demographic characteristics and university experiences of the study participants	212

7.3.2.2	Local university experience factors associated with Social Anxiety Disorder among university students in Sri Lanka	214
7.3.2.3	Local university experience factors correlating with Social Anxiety Disorder among university students in Sri Lanka	216
7.3.2.4	Local university experience factors independently associated with Social Anxiety Disorder among university students in Sri Lanka	218
7.4	Discussion	219
7.5	Limitations of the study	228
7.6	Conclusions and implications for the future	228

STUDY II – CROSS CULTURAL ADAPTATION OF COGNITIVE BEHAVIORAL GROUP THERAPY FOR SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA

CHAPTER 8 – STUDY II – LITERATURE REVIEW FOR THE CROSS-CULTURAL ADAPTATION OF COGNITIVE BEHAVIORAL GROUP THERAPY FOR SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA

8.0	Introduction	234
8.1	Treatment for Social Anxiety Disorder	234
8.1.1	Pharmacological treatment	235
8.1.2	Psychological treatment	236
8.2	Cognitive Behavioral (Group) Therapy	237
8.3	Cultural issues in the cross-cultural application of Cognitive Behavioral Therapy	240
8.4	Culture and mental health	242
8.5	The need for cultural sensitivity in psychological interventions	244
8.6	Psychotherapy application in diverse cultural contexts	248
8.7	Asian cultural values and challenges in cross-cultural psychotherapy	251
8.8	The Sri Lankan cultural context and implications for psychotherapy	253

8.9	Addressing the Asian cultural value implications in psychotherapy	255
8.10	Cultural adaptation of psychotherapy	257
8.10.1	The ecological validity and cultural sensitivity framework	260
8.10.2	The psychotherapy adaptation and modification framework, and the formative method of adapting psychotherapy	262
8.10.3	Other psychotherapy cultural adaptation guidelines	263
8.11	Cultural adaptation of Cognitive Behavioral Therapy	264
8.12	Cultural adaptation of Cognitive Behavioral Therapy for anxiety disorders	266
8.13	Cross-cultural adaptation of Cognitive Behavioral Therapy in South Asia	267
8.14	Consideration for cultural adaptation of Cognitive Behavioral Therapy in South Asia	270
8.14.1	Religion and spirituality	270
8.14.2	Communication and language	271
8.14.3	Assessment	275
8.14.4	Engagement and adjustments to therapy processes	276
8.14.5	Other considerations	279
8.15	Issues in cultural adaptation of psychological therapies	281
8.16	Conclusion	282

CHAPTER 9 – STUDY II – METHODOLOGY FOR THE CROSS-CULTURAL ADAPTATION OF COGNITIVE BEHAVIORAL GROUP THERAPY FOR SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA

9.0	Introduction	284
9.1	Methodology	284
9.1.1	Step one – Identification of the intervention protocol information	284
9.1.2	Step two – Discussions with experts in the field and the review of the intervention protocol for validity in the identified cultural context	285

9.1.3 Step three – Incorporating modifications from step two and addressing implications to protocol	285
9.1.4 Step four – Review protocol for validity with stakeholders and the integration of cultural elements	286
9.1.5 Step five – Translation and review of therapy materials	287
9.1.6 Step six – Testing for effectiveness of the adapted protocol	287

CHAPTER 10 – STUDY II – RESULTS AND DISCUSSION OF THE CROSS-CULTURAL ADAPTATION OF COGNITIVE BEHAVIORAL GROUP THERAPY FOR SOCIAL ANXIETY DISORDER AMONG UNIVERSITY STUDENTS IN SRI LANKA

10.0 Introduction	288
10.1 Results	288
10.1.1 Step one – Identification of the intervention protocol information	288
10.1.1.1 Protocol information	288
10.1.1.1.1 The orientation interview	289
10.1.1.1.2 Sessions one and two	290
10.1.1.1.3 Sessions three to eleven	290
10.1.1.1.4 Session twelve	291
10.1.1.1.5 Facilitator characteristics	291
10.1.1.1.6 Client considerations	292
10.1.1.1.7 Time and setting	293
10.1.2 Step two – Discussions with experts in the field and the review of the intervention protocol for validity in the identified cultural context	294
10.1.2.1 Program length and time	295
10.1.2.2 Facilitators	296
10.1.2.3 Clients	296
10.1.2.4 Language	296
10.1.2.5 Psychoeducation on emotions	297
10.1.3 Step three – Incorporating modifications from step two and addressing implications to protocol	297

10.1.3.1 Program length and time	297
10.1.3.2 Facilitators	298
10.1.3.3 Clients	299
10.1.3.4 Language	299
10.1.3.5 Further implications in making modifications as per the expert recommendations	300
10.1.4 Step four – Review protocol for validity with stakeholders and the integration of cultural elements	306
10.1.4.1 Development of cultural elements	306
10.1.4.1.1 Development of an ice breaker	307
10.1.4.1.2 Development of the psychoeducation content structure	308
10.1.4.1.3 Development of metaphors for the treatment protocol	308
10.1.4.1.4 Development of a culturally relevant therapeutic activity I – Mindfulness in the form of focusing outwards	314
10.1.4.1.5 Development of a culturally relevant therapeutic activity II – An ending ritual – compassion meditation	315
10.1.4.1.6 Development of worksheets in the Sinhala language	316
10.1.4.2 Validity of the developed content and integration to the Cognitive Behavioral Group Therapy protocol	316
10.1.5 Step five – Translation and review of therapy materials	318
10.1.5.1 Initial review findings by the investigator	318
10.1.5.2 Considerations during translation	319
10.1.5.3 Content and consensual validity of the translated manual	320
10.1.5.3.1 Brief fear of negative evaluation scale	321
10.1.5.3.2 Overall comments	322
10.1.5.4 Review of the translated manual by a bilingual mental health and language expert	323

10.1.6 Step six – Testing for effectiveness of the adapted protocol	323
10.2 Discussion	326
10.3 Limitations and implications for the future	334
10.4 Significance of the research and conclusions	341
CHAPTER 11 – CONCLUSIONS AND RECOMMENDATIONS	343

The Formative Method of Adapting Psychotherapy

ACKNOWLEDGEMENTS

I have heard that completing a Ph.D. dissertation is not one man's effort. This dissertation is also no exception. It is nothing less than the cumulative effort of a small village whom I hope to acknowledge for their contributions.

Firstly, my supervisors. I was invited to join the research project and pursue a Ph.D. degree by Prof. Shehan Williams. Since coming on board, Prof. Williams has supported me, inspired me, motivated me, and trained me to think along the lines of an academic, and for all these reasons listed above, I am grateful. Then, I am thankful for the support of Prof. Piyanjali de Zoysa, who has supported and guided me and pushed me to become a better researcher and communicator during this journey. Finally, I cannot forget my unofficial supervisor and mentor, Dr. Anna Eliatamby. Although not officially mentioned on paper as a supervisor, Dr. Eliatamby continued to support me, reviewed this work, and provided comments to improve it further. For this and more, I am extremely grateful.

I must also thank Prof. A. Pathmeswaran, who supported me in all things statistical. His expert knowledge and kind attitude made me clear any doubts about statistical analysis without hesitation. I also want to acknowledge the support of Dr. Aruni Hapangama, an initiator of this project and Head of the Department of Psychiatry, who provided me with the psychometric instrument LSAS-SR that facilitated this research. Finally, I am also grateful to the Board of Study members, and the Ethics Review Committee at the Faculty of Medicine members, for all their support and comments for improvement.

Many other academics and professionals have helped shape this research, without whose comments and suggestions this research would not be possible, namely, Dr. Asiri Rodrigo, Dr. Kanthi Hettigoda, Dr. Rekha Attidiye, Ms. Roshan Dhammapala, Ms. Achira Telwatte, Ms. Sachini de Fonseka, Ms. Omela Outschoorn, Ms. Theruni Karunawardhane, Ms. Thejani Bulathwaththa, Dr. Chulani Herath, Ms. Hema Ranawake, Mr. Sriyal Nilanka among others. I am ever so thankful for all their

contributions and others who I may not have mentioned here but contributed to this project; I am grateful.

Also, I would like to acknowledge the Vice-Chancellors of the University of Jayawardenapura, University of Moratuwa, University of Wayamba, University of Visual and Performing Arts, and the Southeastern Universities for permitting me to carry out this study and providing me with constructive comments and support. Furthermore, I must acknowledge supporting university officers and research assistants from each university, who assisted with the administration of the research survey to the best of their extent during a trying time globally. I am also grateful for all 1167 plus students who voluntarily participated in this study, without whose contributions this study would not be successful. Further, I must also mention Ms. Tharika, the demonstrator from the Department of Psychiatry, who successfully assisted me with data entry and coding. Then, I would also like to acknowledge Mr. Kapila and Mr. Lakmal from the Faculty of Graduate Studies, the University of Kelaniya, for all their support in administrative aspects related to this degree. Additionally, I must also acknowledge Dr. H. M. C. J. Herath, Head of the Department of Psychology and Counselling, Dr. B. S. S. de Silva, Dean, Faculty of Health Sciences, and Prof. P. M. C. Thilakarathne, Vice-Chancellor, OUSL, for providing me with three months study leave to complete writing and submit the dissertation. The leave granted was instrumental in achieving the writing of this dissertation.

Finally, my family has shared all their resources and sacrificed their time and energy to allow me to pursue higher studies. My parents, parents-in-law, my sisters, my brothers-in-law, my nephews, and my nieces have all knowingly and unknowingly been pillars of support throughout this journey. Last but not least, my partner, Nandun, who is an equal investor in the success of this project, without whose support, hard work, and many sacrifices, the successful completion of this research project would not have been a reality.

ABSTRACT – STUDY I

Social Anxiety Disorder (SAD), one of the most common mental health disorders globally, demonstrate early-onset, chronic course, and debilitating dysfunction in all social spheres, especially in education. There is a scarcity of information on SAD in Sri Lanka, and none among university students. Therefore, the study objectives were to determine prevalence and associated risk factors among university students in Sri Lanka.

A cross-sectional study was conducted among 1137 students from five state universities. The Liebowitz Social Anxiety Scale – Sinhala version and a Psychosocial Correlates Questionnaire for SAD developed for this study, were used as instruments. The analysis included bivariate analysis such as chi-square tests for independence, and Spearman's r correlations to identify significant associations. Identified variables at $p < 0.05$ were entered in to binary logistic regression models to determine factors associated with social anxiety disorder.

Of the 985 who completed the questionnaires, 57.1% screened positive for SAD. In terms of demographic factors and clinical characteristics, female gender (AOR=1.41, 95%CI 1.10-1.84, $p = 0.01$) and a history of mental health issues (AOR=2.79, 95%CI 1.90-4.10, $p < 0.001$), and in terms of negative family and adverse childhood experiences, experiences of emotional abuse (AOR=1.31, 95% CI 1.11- 1.54, $p = 0.001$), parent dissatisfaction (AOR=1.07, 95% CI 1.01- 1.13, $p < 0.05$) and overcontrol by parents (AOR=1.08, 95%CI 1.02-1.15, $p < 0.05$) remained significantly associated risk factors for SAD. Further, body dissatisfaction (AOR=1.05, 95% CI 1.05 – 1.10, $p < 0.05$), and dissatisfaction with breasts (AOR=.60, 95% CI .46 – .77, $p < 0.001$) were identified as associated significant factors of SAD. Additionally, in terms of school experiences, experiences of humiliation, not being accepted or rejection by school friends (AOR=1.63, 95% CI 1.29-2.05, $p < 0.001$) and rejection, invalidation or isolation due to social connections (AOR=1.3, 95% CI 1.08-1.58, $p < 0.001$), while in university experiences, experiences of humiliation, not being accepted or rejection by friends (AOR=1.31, 95%CI 1.09-1.60, $p < 0.05$), experiences of mental harassment (AOR=1.47, 95%CI 1.12-1.92, $p < 0.05$), and viewing the medium of

study as a challenge,(AOR=1.55,95%CI1.16-2.10, $p<0.05$) remained independently and significantly associated with SAD.

The study recognizes a high prevalence rate of SAD and associated risk factors among university students in Sri Lanka. Although, diagnostic interviews were not conducted and the actual prevalence rates may be lower, this is an under-recognized issue which needs further exploration as students with SAD will be challenged in their academic and occupational pursuits.

ABSTRACT – STUDY II

Social Anxiety Disorder (SAD), one of the most common mental health disorders globally, demonstrate early-onset, chronic course, and debilitating dysfunction in all social spheres if left untreated. While previous research notes high prevalence of SAD among university students in Sri Lanka, there is a dearth of culturally valid psychological treatment. Further, cultural adaptation of psychotherapy notes high engagement and effectiveness of treatment outcomes among non-western cultures. Therefore, the objectives of this study were to identify an evidence-based treatment and to culturally adapt it to suit the local university student context.

The methodology constituted of six steps. Step one to identify the intervention and protocol information, step two to carry out discussions with experts in the field and to review the identified intervention for validity in the local university student context, step three to incorporate modifications and address any implications to protocol. Step four was to review the treatment for validity with stakeholders and integrate cultural elements, step five to translate and review of material, and finally the sixth step to test the culturally adapted treatment for effectiveness.

The Cognitive Behavioral Group Therapy (CBGT) protocol developed by Heimberg & Becker (2002) was identified as an evidence-based treatment for SAD. Then, modifications were made to program length and time, facilitators, clients, language to Sinhala, and an addition of a psychoeducation module. Following which, modifications were reviewed with implications addressed for each proposed change in protocol. In step four, cultural elements were developed in terms of an ice breaker, psychoeducation content, metaphors, mindfulness-based activity, and an ending ritual. Complementary worksheets were also developed in the Sinhala language. Validity of the newly development content was reviewed with a cohort of Sinhala literate university students. In step five, intervention manual was translated to Sinhala, and subjected to a Delphi validation methodology with bilingual mental health experts in Sri Lanka. Finally, the culturally adapted treatment was administered within a randomized waitlisted control study and determined as an effective treatment.

While providing an effective culturally valid psychological treatment for SAD among Sri Lankan university students, the study creates a foundation for future studies related to cultural adaptation of psychotherapy in Sri Lanka.
