[1. A study of Ceylon Island Atyidae was undertaken. A small portion was performed and the results obtained to date are reported here. 2. A new species, *Caridinia fernandoi* and a new subspecies of *C. nilotica zeylanica* are described. *C. singhalensis* Ortmann (1894) and *C. pristis* J. Roux (1931) are redescribed as some notable differences from the original descriptions of these species have been observed. *C. gracilirostris* De Man (1892) is reported in Ceylon for the first time, and the presence of two forms, *Caridinia nilotica simoni* Bouvier (1925) and *Atya spiniper* Newport (1847), it is mentioned again. 3. A preliminary account of the distribution of different forms is drawn, with a much more detailed development remains to give. 1. A study of Ceylon Island Atyidae was undertaken.
